Deonte Ruiz

User Account:
I made a Local Standard User called “LocalAcc” to enforce the Principle of Least Privilege (PoLP). By using a standard local account for everyday tasks (web browsing, document editing, testing applications) instead of the primary Administrator account, the system prevents unauthorized system-wide changes and limits the impact of potential malware or accidental misconfigurations.

Password Configuration:
Passwords must meet complexity requirements: Enabled
Maximum password age: 42 days
Minimum password length: 0 characters
Enforce password history: 0 passwords remembered
Minimum password age: 0 days
Store passwords using reversible encryption: Disabled

7-zip:
I downloaded and installed 7-zip onto “LocalAcc" in the C drive and I toggled on “Show system menu” in the settings tab because it allows quick access to a file's full Windows properties.
Firefox:
I downloaded and installed firefox onto “LocalAcc” in the C drive and set it as the default browser. Set the theme to black. Pinned it to the taskbar for easier access.
Notepad++:
I downloaded and installed Notepad++ onto “LocalAcc” in the C drive and I made a shortcut on the desktop. I went into settings then preferences and changed it to Dark mode for easier visibility.
Power:
Changed “turn my screen off after” to never.
